“S” External Ball Vibrators

8

Description ▼

“S” External Pneumatic Ball Vibrators develop frequencies of up to 35,000 r.p.m. and they are used wherever powdery materials have to be moved. “S” External Ball Vibrators are installed on bins to prevent bridging or ratholing and for the improvement of material flow on chutes, screens and vibrating tables.

Function ▼

“S” External Ball Vibrators consist of an anodized aluminium body inside which a steel ball rotates on a specially hardened and ground steel ring. For operation a 2/2-way-valve and filtered compressed air are required.

Application ▼

“S” External Ball Vibrators are used in all types of powder or granular material processing plants where flow aids are required. Typical applications are compounding or masterbatch lines. They are fitted on FIBC (Bulk Bag) dischargers or storage, weigh or feeding hoppers.

Benefits ▼

- ✓ High centrifugal force and low amplitude;
- ✓ ATEX Zone 22-compliant – Ex II 3D T100°;
- ✓ Suitable for powdery or granular materials;
- ✓ No damage to bin structure;
- ✓ Low air consumption;
- ✓ Durable;
- ✓ Easy to install;
- ✓ Maintenance-free when used with filtered/lubricated air.

Plastics Processing

“S” External Ball Vibrators

Technical Features / Performance ▼

- ▶ Galvanised steel cover
- ▶ Brass silencer
- ▶ Nickel-plated brass air nipple inlet
- ▶ Operating temperature: -20° C to 180° C (-4° F to 356° F)
- ▶ Operating pressure: 3 to 6 bar (44 to 88 PSI)

Overall Dimensions ▼
